

IT Going Green

Architect Your Data Center with the Latest Global Green Solution

The market for Data Center Infrastructure experienced groundbreaking evolution in the past six years - industry standards, virtualization, green regulations and resulted PUE measurement, and so on. When all these meet with the ordinary things - cost saving, space saving, capacity maximizing, manageability and reliability, IT and Data Center Managers will have a big question, "How should I master all these changes and shape up my Data Center in the wisest and the least costly way?"

Want an insight? We cordially invite you to our seminar at MGM Macau on 14 July 2011, Thursday.
