

Data Center Workshop for FSI and IT Driven Industry

“ It’s not a DIY work! ”

The market for Enterprise Data Center Infrastructure has been experiencing much evolution in the past 5 years - industry standards, virtualization, green regulations and resulted energy and power management, and so on. When all these meet with the ordinary elements - cost saving, space saving, capacity maximizing, manageability and reliability, IT and Data Center Managers will have a big question, “How should I shape up my data center in the best and the least costly way?”

While heaps of challenges annoying you, we, as a professional and market leader participating for nearly 20 years, digested and prioritized the elements for you. In this half-day workshop, we go through some crucial sections with you. So that you will have more solid ideas on how to enhance, renovate or plan for your Data Center according to the global trend.

“
